

5 finishes to choose from

Satin Finish

Geo-Matrix Finish

Cosmic Finish

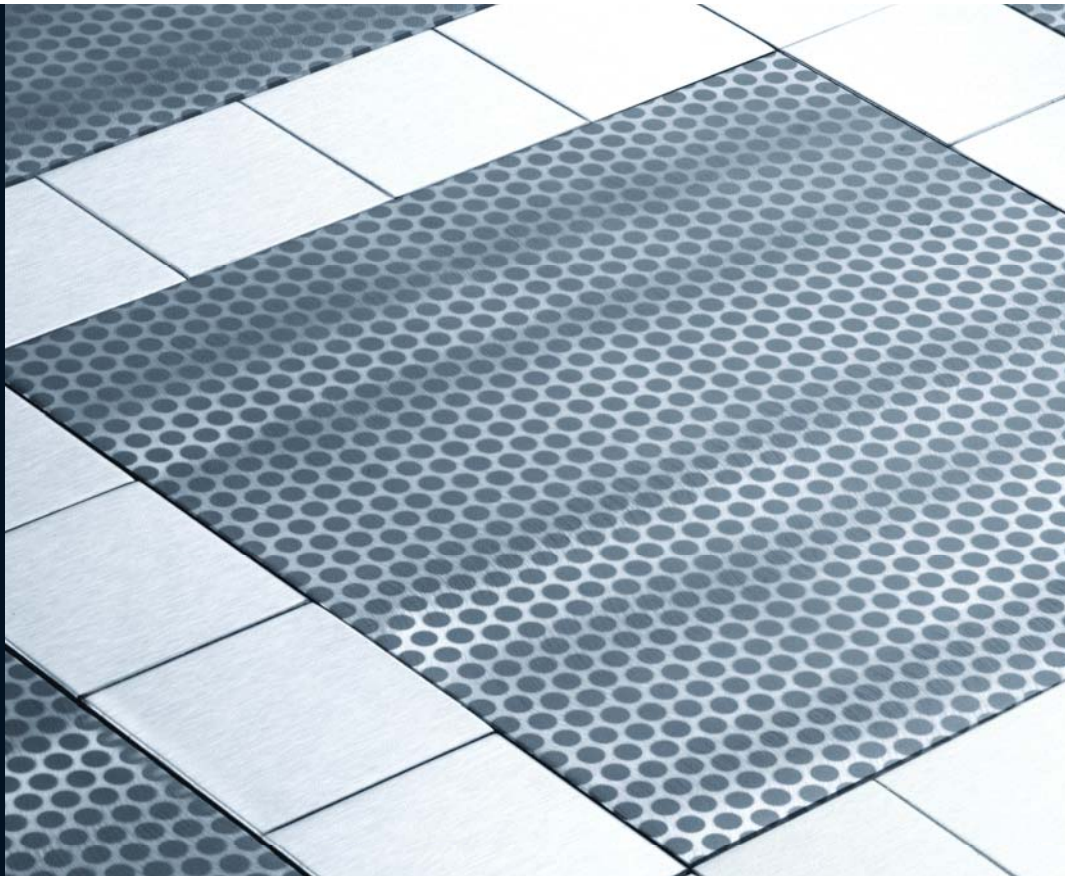

Honeycomb Finish

Mira Finish

Images not to scale

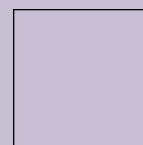

- Architectural design for residential and commercial projects
- Systematic patterns for wall, backsplash and floor installations
- Decorative inserts and accent trim uses

Neo-Tiles™ are a durable and diverse finish material that can be installed in most applications where traditional tiles can be set. Because of the properties of stainless steel, a Neo-Tile installation becomes a practical and functional environment. The tile is easy to clean, and reduces bacterial buildup. The collection is available in four standard sizes and five finishes. Each 14-gage stainless steel tile is precision laser cut, with all edges de-burred for a clean finish. Custom size tiles are available.

Sizes Available

12" x 12"
(305mm x 305mm)

8" x 8"
(203mm x 203mm)

6" x 6"
(153mm x 153mm)

4" x 4"
(102mm x 102mm)

Custom sizes available

Standard Installation Notes: The use of stainless steel tile application is an alternatively new concept. As with all quality projects, it is highly recommended to contract an experienced tile setter for your installation. **(a)** Installation surface must be solid and leveled entirely. A solid mortar bed or cement board, as used for traditional tile installations, is recommended. **(b)** Once surface is prepared and ready for the tile, a tile-setters mastic compound adhesive should be used. **(c)** Pre-installation measurements are important to determine if special tile shapes and custom sizes are available. **(d)** Grouting of the joints after setting the tile is recommended. Use a non-sanded grout to avoid unwanted scratch marks and flaws to occur on the tile surfaces. Other precautions to protect the tile surfaces may be required.

Cleaning Guidelines: Although stainless steel is considered to be a durable material, special cleaning and maintenance is required to help keep Neo-Tile looking its best. To clean, use a hand dish washing liquid mixed with a soft-water solution, or use a mild soap with a soft-water solution, 3M Stainless Steel Cleaner/Polish, white vinegar with soft water solution (for brightening, removing oil film, or hard-water deposits), or club soda and natural sponge.

Products to Avoid: Harsh polishing cleaners (Comet, Bon Ami, etc.), harsh chemicals (strong acidic or alkaline materials such as hydrochloric acid, sodium hydroxide, etc.), any abrasive substance (dirt/mud, ceramic items, etc), chlorinated cleansers, sanitizers or bleach of any kind, steel wool, steel utensils, or any object made of steel, any metal left in contact with stainless surface (hair pins, paper clips, aerosol cans), seawater or excessively hard water, salt or salty foods allowed to dry on surface, leaving hard water sitting (evaporating) for extended periods, or allowing mineral deposits to collect.

Cautionary Note: Tiles slippery when wet. Not all finishes are recommended for high traffic areas.
